

# SKYSTRIKER

## TACTICAL LOITERING MUNITION

### KEY BENEFITS

- One-shot, One-Kill
- Modular and scalable for mission flexibility
- High standoff for maximum covertness
- Effective in LOS obstructed and mountainous terrain
- High lethality warhead for a variety of targets
- Extended loiter window for target detection, identification, tracking and engagement
- Advanced capabilities to decrease operator workload

### FEATURES

- Detection at 5 km
- 1 hour loiter time at 40 km
- Armor-penetration & Anti-personnel in a single warhead
- Modular and scalable supports a variety of payloads and warheads
- Advanced processing for enhanced targeting & navigation

SkyStriker answers the demand for enhanced situational awareness, lethality, and endurance in a precision tactical munition. Our mid-size, high lethality loitering munitions family supports organic squad level deployment up through complex, division level advanced teaming. SkyStriker modular design configures today to support tonight's fight.

The DNA of SkyStriker precision strike technology is based on a decade of operational experience and offers our users One-shot, One-Kill confidence. The exceptionally powerful optics package enables high standoff for covert operations in LOS obstructed and mountainous terrain. The armor-penetration and anti-personnel warhead are effective against APC's, 'Tactical's, even MBTs with non-reactive and reactive armor. At operational range, SkyStriker is able to loiter for over an hour to detect, identify, track and prosecute targets. The ability to abort mid-strike, to re-engage, or to abort a mission ensures low collateral damage and precision kinetic effect.

SkyStriker-C is the newest variant in our loitering munitions family. It's streamlined, folded wing design enable single canister or vehicle multi-pack launch which integrate with a variety of land, sea-based, and airborne platforms. Enhanced on-board processing decreases the operator workload while simultaneously increasing the operator's lethality. Like SkyStriker, SkyStriker-C has a large, modular, nose compartment that accommodates a variety of payloads and warheads.
